egeavunc@gmail.com

Summary

- Startup oriented builder working with entrepreneurs who don't have the luxury of failure
- Significant experience as a founding engineer & CTO
- Track record of delivering complex, mission critical software products with good user experience
- Experience in fintech, crypto, digital marketing and e-commerce
- Pragmatism, simplicity, velocity and transparency as values

Skills

- Developing full-stack & mobile & blockchain apps
- Main tools: Python, Go, Typescript, React (+Native), Postgres
- Analyzing & processing data with advanced SQL and Python
- Administering Debian / CentOS Linux
- Scaling with AWS & GCP & Heroku
- Building & managing engineering teams
- Data engineering
- Solutions engineering
- Outsourcing

Education

- BA Philosophy, Istanbul University, 2011 (dropped out)
- Lycée Privé Français Saint-Joseph d'Istanbul, Science, 2007

Experience

Nodely – Founding Engineer (Contract) – 2025

Crypto on-chain analytics platform similar to CryptoQuant and Glassnode. Exhibits ~50 indicators to help crypto traders make decisions.

Tech: Python, Javascript, Node.js, React, Postgres, Linux

Fitext – Advisor – 2025

A free, transparent, health-based social media ecosystem that provides its users with all the tools required to live a healthy lifestyle. A personalized, holistic, data driven solution to meet the users exactly where they are on their health journey and help them be the healthiest version of themselves.

Referencehood – Co-founder & CTO – 2022-2024

Platform that refers traders to crypto exchanges and reimburses them a part of the referral fees they generate, effectively causing a perpetual discount on trading fees.

Features a mobile compatible responsive web app and a simple banking system to support features such as balance, withdrawal and reward systems. Loved very much by to community and had an ~\$60K MRR in its later days.

Tech: Javascript, Node.js, React, Postgres, Linux

BW Capital (Stealth) – Co-founder & CTO – 2023-2024

Trading company developing semi-automated trading solutions. Operated on the Istanbul Stock Exchange (BIST).

We built a trading software that interfaced with BIST using [Nasdaq's ITCH & OUCH](#), without any middleman. The tech acquired the necessary certifications for this and our company was recognized as a partner to BIST.

Tech: C, Javascript, Postgres, Linux

EEVA Fund (Stealth) – Interim CTO – 2021-2022

Humble crypto fund that didn't prefer to be public facing that managed the funds of families & friends. The AUM was around \$2M at its peak during my time.

Built semi-automated trading strategies for a small team of traders, quants and software developers.

Developed tools such as:

- Monitors & alarms to track the market
- Algorithms to automate buying & selling
- Apps to track & rebalance portfolios

- Reporting software to generate reports for clients

Tech: Python, Javascript, Node.js, React, Postgres, Prometheus, Grafana

Curve Labs – Product Engineer (Contract) – 2021

Decentralized web application for the [API3 DAO](#), integrated to Ethereum smart contracts.

API3 was a client of Curve Labs, a web3 design & development agency. I was contracted to build the web client of the product.

Tech: Javascript, React, Ethers.js

ixo – Product Engineer (Contract) – 2020

Development of the ixo client SDK and a mobile app.

IXO World is a web3 Internet of Impacts, which provides essential digital financing and data verification infrastructure for sustainable social, environmental and economic development, and to mitigate Climate Impacts.

Some of my work was open source and can be seen via the following links (I am [gwn@github](#)):

- <https://github.com/ixofoundation/ixo-client-sdk>

- <https://github.com/gwn/ixo-app>

Tech: Javascript, React, React Native

Bilira – Founding Engineer – 2019-2020

Bilira is a stable cryptocurrency that is backed by the Turkish Lira. This means that you can always buy and redeem 1 BiLira for ₺1.00 Turkish Lira.

Architected & developed all parts of the BiLira v1 product, founded & guided the early stage engineering department together with the CTO; and many more due to being employee #1.

A protected dashboard for BiLira buyers & sellers, KYC verification, issuance & redemption & swapping of BiLira, wallet to wallet transactions, integration with 3rd party wallet provider services, global exchanges, payment systems, and other tools in the decentralized finance ecosystem.

Tech: Javascript, React, React Native, Node, Fastify, Postgres, Ethereum, Hydra OAuth2 Server

Usvision – Interim CTO – 2018

Usvision provides remote crowdsourced UX testing and market research solutions for organizations with digital business operations. The company provides marketers, developers, product managers, and UX designers on-

demand access to people in their target audience which are utilised to provide qualitative and quantitative intelligence.

The project at my time consisted of protected researcher & marketer dashboards featuring remote focus groups, UX testing, and ad testing.

Tech: Javascript, Node, React, Postgres, WebRTC

Apres – Founding Frontend Engineer – 2017

Apres was an API for human automation, an on-demand workforce anyone can program. The software integrates an on-demand, virtual workforce to complete structured tasks, managed for quality.

I developed the web client and built protected customer & worker dashboards enabling the ordering & implementation of tasks such as data enrichment/annotation, OCR transcription, categorization, comparison, and data collection.

Tech: Javascript, React

Adphorus – Backend Developer – 2016

Adphorus (acquired by Sojern) was a travel marketing science company and a Facebook marketing partner.

During my time in Adphorus I was mainly responsible with feed processing and delivered a product jokingly named "the Lord of the Feeds". It was a generic feed transformer app that enabled its users to collect various feeds (CSV, Excel, XML) from different sources, build pipelines to transform them according to predefined rules and save the results in target locations. Some supported features were transformations between different feed formats (CSV / TSV, XML), row & field mapping / reducing / filtering, duplicate removal, and automatic image transformation (if the field contains an image URL).

Tech: Python, Postgres, Redis, Celery, AWS Lambda, Javascript, Vue

SEM TR – Technical Solutions Consultant – 2014-2015

SEM TR is one of the biggest digital marketing agencies in Turkey. I was hired to be a part of a small department responsible of data analysis & conversion optimization.

My responsibilities included:

- Helping the analysts fill technical gaps in their everyday jobs such as helping with Excel or Google BigQuery tasks
- Integrating marketing tools to customer websites. Marketing tools such as Google Analytics, Google Tag Manager, Amplitude, MixPanel, Optimizely, Hotjar..

- Developing Javascript libraries to inject into customer websites for custom measurements & analyses. I also developed & owned a product called the "Real-time e-commerce dashboard" which was a private dashboard for retail executives that visualizes sales & other significant events real time with fancy animations, and allows for time & category based filtering & grouping.

Tech: Python, Javascript, D3, Postgres, Google Analytics & Adwords APIs

Glacial Multimedia – Full stack developer – 2012-2014

Glacial Multimedia is an agency based in Maine specialized in medical web app development.

I worked on various projects here in the span of 2 years.

Tech: PHP, Codeigniter, Yii, Laravel, Javascript, jQuery, MySQL

Hipo Labs – Full stack developer – 2011

Hipo Labs was the best boutique web development agency in Turkey until they were shut down in 2023. I was fortunate enough to be hired as their first developer. Worked on several projects over time and learned much here.

Tech: Python, Django, Javascript, React, Postgres

4C Music – Full stack developer – 2009-2011

4C Music is a wholesale and retail supplier for musical instruments and accessories. They were the official distributor of Fender, Ibanez and Cort guitars in Turkey at the time.

I was tasked with developing an e-commerce platform and integrate it with the ERP & CRM systems used in the company. On top of the e-commerce platform I also shipped a detailed analytics dashboard for the managers to analyze shipment, sales, and human resources related metrics.

Tech: PHP 5, Javascript, jQuery, MySQL, SQL Server

Trivia

I..

- type faster than you
- know a lot of funny jazz chords

- care a lot about fitness
- know a lot about good nutrition
- am a regular water faster
- once published a philosophy magazine
- can probably beat you in tennis
- have a twin sister
- speak a bit French
